

Pretty cool Water for Injection

MEMBRANE-BASED GENERATION,
AMBIENT STORAGE, DISTRIBUTION,
AND MONITORING OF WFI.

BWT OSMOTRON WFI

BWT LOOPO WFI

OSMOTRON WFI and LOOPO WFI are the ultimate combination for the alternative membrane-based processes alongside distillation for generating Water for Injection from drinking water, storing and distributing it – all according to Ph. Eur. 0169 and USP <1231>. BWT's unique triple membrane barrier technology in the OSMOTRON WFI ensures best quality and efficiency in production. Extensively tested with an independent university of applied sciences. The LOOPO WFI continuously ozonates your storage tank and monitors the WFI quality. Sanitization options include comfortable ozonization of the complete storage and distribution system or hot water sanitization. Maximum reliability and security.
